What is claimed is:

1. A method for debugging in more than one programming language, comprising:

      providing an interface with a debugging frame for each language; and

      allowing a user to edit each language in a debugging frame.

2. A method according to claim 1, further comprising:

      providing the capability to interpret multiple languages within a single source file and allow each of the multiple languages to be displayed in a debugging frame.

3. A method according to claim 1, further comprising:

      providing the ability to support additional languages.
